Lab Assignment 1

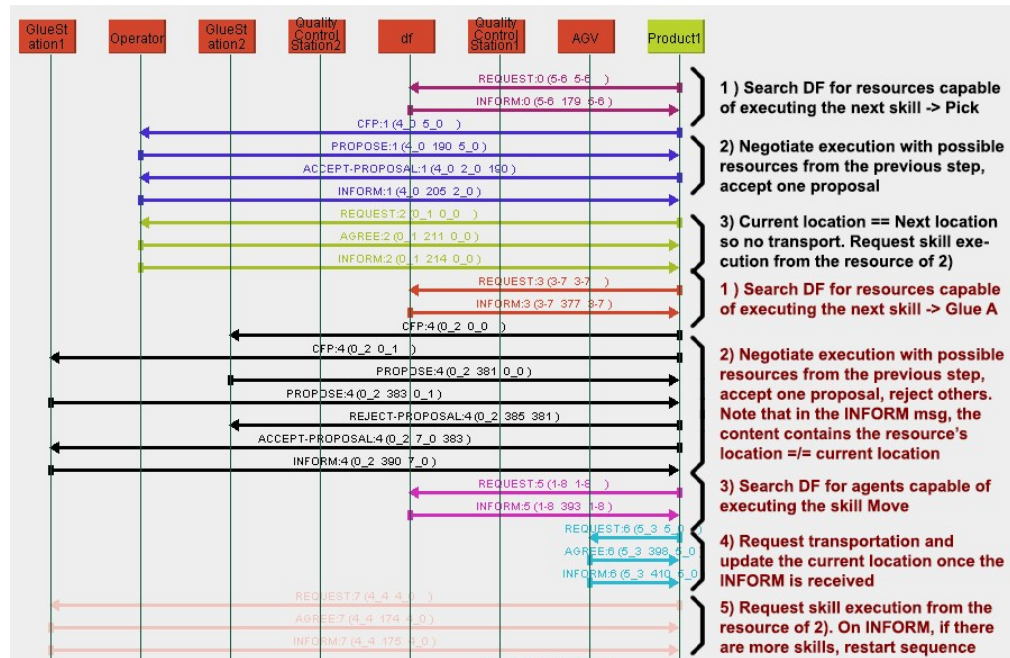

Overview of the Communication Sequence

Ricardo Peres | André Rocha | José Barata

Using JADE's Sniffer – Communication Sequence

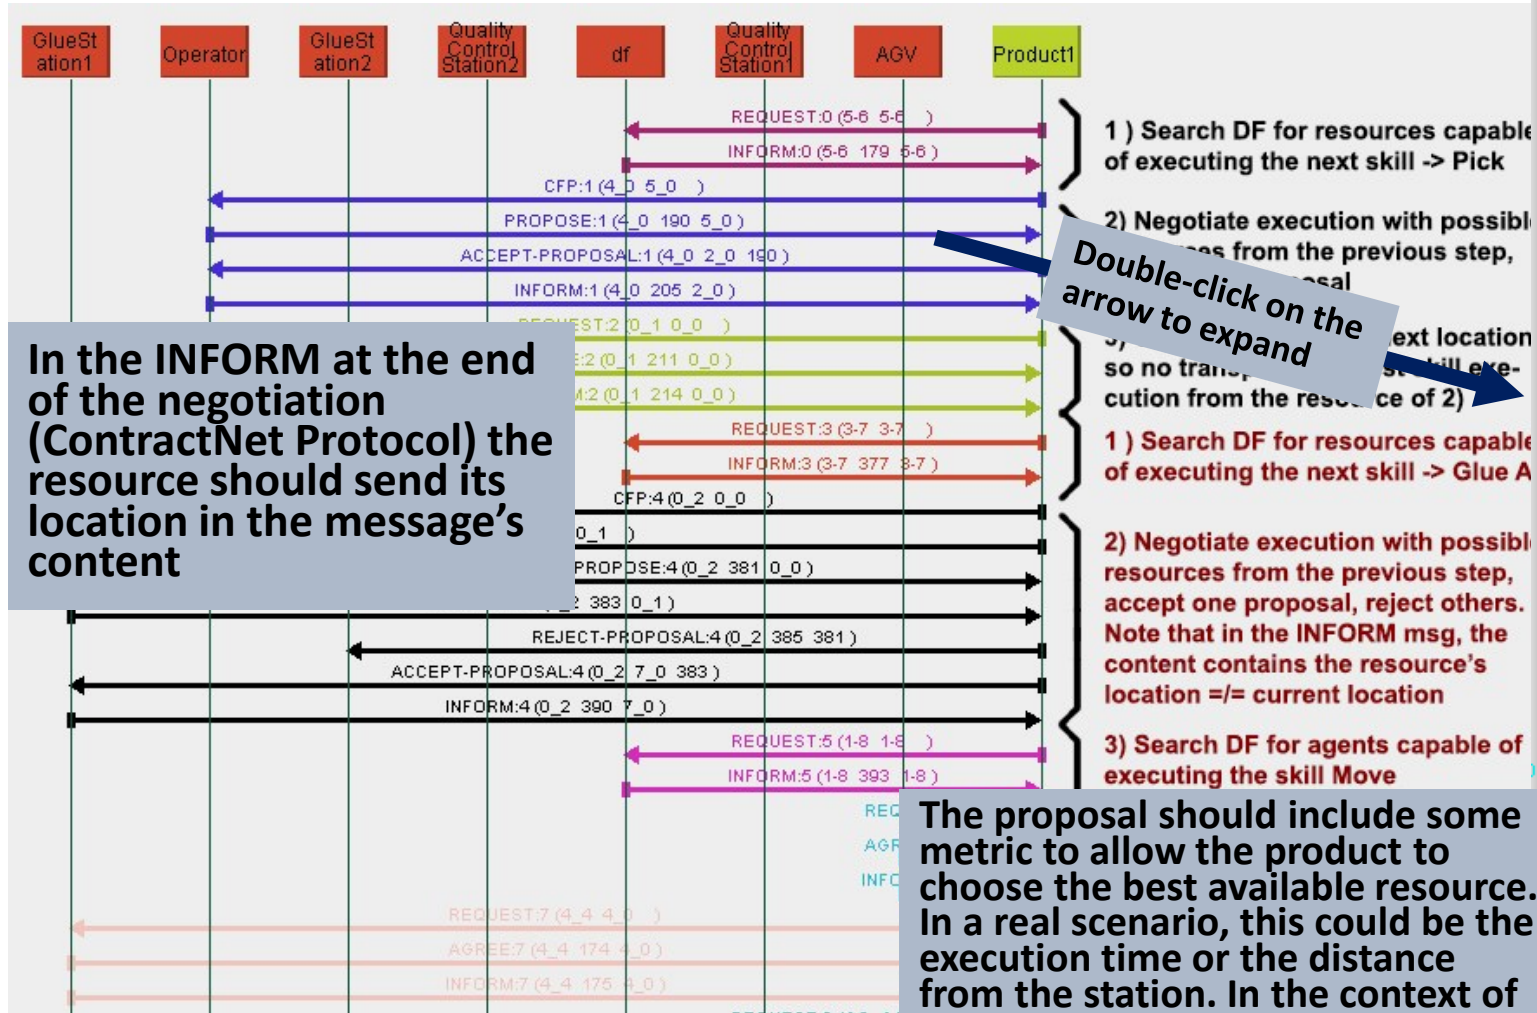

Using JADE's Sniffer – Communication Sequence

- From here, the sequence basically repeats until there are no more skills/operations left to execute in the product's list;
- The product controls the entire flow of execution;
- Main sequence can be implemented in different ways, but common approaches include using a Sequential Behaviour or an FSM Behaviour;
- In case of a Sequential Behaviour, repeating the sequence = re-adding the behaviour to the agent;
- Remember that behaviours can add other behaviours to the agent:

`myAgent.addBehaviour(.....)`
